Synopsis

This program will provide an overview of the nature of security threats facing organizations today and will examine the business threats associated with these risks. We'll then look at how best practices associated with risk management are being implemented today. This will include an examination of the key technologies, policies and procedures associated with security management and look at how to assess the ROI on security investments.

Our speakers bring together a deep background and wealth of experience in the computer security industry and will enrich the discussion with numerous cases, examples and real-world experiences. The net return for session participants will be a series of practical take-a-ways that will allow you to assess your organization's risk and readiness to deal with security threats.
